

Satellite Internet Solutions for Remote Australia

Bring dependable, high-speed internet to remote agricultural properties, seasonal work sites, and on-farm accommodation across Australia. Our mobile satellite internet trailers deliver professional-grade telecommunications infrastructure wherever your operation needs it -without relying on fixed network coverage.

Reliable Connectivity

High-speed internet for remote farms and stations

Rapid Deployment

Operational within hours of arrival

Solar Powered

Self-contained energy system

Wide Coverage

Up to 30-metre WiFi radius

What Is the Gurlibil Telecommunications Trailer?

A complete telecommunications hub built onto a sturdy four-wheel trailer, custom-designed for rapid deployment in remote and regional locations. This self-contained system runs entirely from solar panels and batteries, delivering professional-grade internet and voice services where traditional infrastructure is limited or unavailable.

Whether you're coordinating harvest teams, running farm offices, managing station accommodation, or supporting on-farm tech (cameras, sensors, software), Gurlibil helps keep your operation connected and responsive.

The trailer features a dual-axle design with **2000 kg payload capacity**, mounted on six Landcruiser rims with tyres plus two spares. It's ready to be towed to site and made operational in the shortest possible time.

Core Components

- Main satellite internet antenna with roof mounts
- Secondary satellite communications unit
- 12-metre telescopic WiFi mast
- Solar power system with battery backup
- Generator connection point

Comprehensive Connectivity Services

The Gurlibil Telecommunications Trailer delivers a full suite of communication services - turning remote agricultural sites into connected workspaces. From internet access to voice calls and on-site WiFi, everything runs through one integrated system.

Mobile Broadband Internet

High-speed satellite internet with unlimited or capped data options. Choose between private satellite service or NBN solutions based on your bandwidth needs - whether you're running farm management platforms, cloud backups, remote monitoring, or staff communications.

Voice-over-WiFi Services

Full mobile phone connectivity for all major Australian carriers. Includes SIP telephone exchange with an Australian landline number. All calls to Australian landlines and mobiles included - ideal for property coordination, suppliers, contractors, and emergency communications.

Property WiFi Network

Strong omnidirectional access point with up to 30-metre coverage radius. Supports handheld devices, laptops, tablets, and VoIP handsets across the site - useful around the homestead, sheds, workshops, accommodation, or temporary work areas.

Local Communications

Internal telephone system using portable WiFi VoIP handsets and smartphone apps for on-site coordination - helpful for larger properties, multiple work crews, and peak-season operations.

Benefits & Value Proposition

Reliable High-Speed Connectivity

Satellite internet provides dependable service in remote farming regions, helping maintain communications even when terrestrial networks are limited, unstable, or impacted by weather and outages.

Simple Deploy & Operate

Tow to site, extend the legs, and switch on. Operational within hours, with minimal technical expertise required - so your team can focus on the job, not the setup.

Farm & Station Office Ready

Fully equipped for remote work and video meetings (including an MS Teams room environment). Supports operational admin, compliance, training, supplier coordination, telehealth/tele-vet consults, and real-time decision making during busy periods.

Extended Coverage

WiFi range up to 30 metres around the trailer connects nearby users and teams - ideal for accommodation areas, site offices, workshops, shearing sheds, packhouses, or temporary harvest bases.

Unique Advantages

1

Always-On Connectivity

Bounded, constantly connected network powered by **2x LEO different satellites + 5G router** ensures uninterrupted service - supporting everything from daily operations to peak-season coordination.

2

Built-In Security

Physical Firewall protection safeguards users, devices, and network traffic - helping protect business systems, farm data, and staff devices.

Cost-Effective

Decreasing satellite costs make professional connectivity more accessible - supporting productivity gains without the delays and costs of fixed infrastructure builds.

Global Bonded Connectivity

A mobile office with global high-speed bonded connectivity and built-in failover for improved uptime - useful for properties that can't afford downtime during harvest, mustering, processing, or logistics windows.

Cloud & Edge Access

Seamless access to cloud and edge computing applications - supporting farm software, remote monitoring dashboards, digital mapping, and secure data access.

Flexible Financing

Finance rent-to-own options available with convenient monthly payments.

Investment & Value

Complete Solution

\$149,990 inc GST

Your complete telecommunications infrastructure - engineered and delivered to connect your agricultural operation from day one.

This all-inclusive package provides reliable connectivity and peace of mind, helping you turn distance and coverage gaps into smooth operations and stronger communication across your property.

Your Investment Includes:

- Fully equipped trailer with state-of-the-art satellite internet system
- Professional installation and comprehensive configuration
- On-site delivery to your specified remote location
- Thorough setup and initial operational guidance
- Dedicated support to ensure seamless, reliable connectivity

Peak Season Scalability

When harvest, mustering, shearing, planting, or picking ramps up, connectivity demands jump fast - more people on-site, more devices, more coordination, and less tolerance for downtime. The Gurlibil Telecommunications Trailer is designed to scale with your operation during these peak windows, delivering reliable communications without needing fixed infrastructure upgrades.

Support more people, more devices, more productivity

- Rapidly provide internet and WiFi for seasonal crews, contractors, and visitors
- Enable multiple devices at once (phones, tablets, laptops, EFTPOS, scanners, smart TVs)
- Keep accommodation areas, site offices, sheds, and packhouses connected

Stay coordinated across the property

- Voice-over-WiFi and on-site calling helps teams stay in touch across work areas
- Improves scheduling, logistics, dispatch, and supplier coordination in real time
- Supports video calls for agronomists, mechanics, vets, and remote management

Deploy where the work is

- Move connectivity between paddocks, sheds, yards, or temporary work bases as priorities change
- Ideal for mobile operations and multi-site properties where coverage is inconsistent

Designed for uptime

- Solar + battery system keeps services running day-to-day
- Backup power options and failover capability help reduce interruptions during critical periods

Get Connected Today

Bring reliable, custom-designed satellite communications to your farm, station, seasonal work site, or regional property accommodation with our rugged, solar-powered trailers.

Contact us today for a tailored quote and to configure your ideal system - including bandwidth, WiFi range, and data package options to match your operation's peak and off-peak needs.

Why Choose Gurlibil?

- Custom-designed solutions for Australian agricultural conditions
- Proven reliability in remote environments
- Comprehensive support and maintenance
- Flexible data packages and pricing options
- Finance rent-to-own options available with monthly payments
